***Burglar-resistant innovation in garage doors hardware***

**A NEW GENERATION OF STOPPING BOTTOM BRACKET  
HAS BEEN CREATED BY TORQUE FORCE, A DIVISION OF CANIMEX INC.**

---

**Drummondville (Canada), November 12<sup>th</sup>, 2007 – Canimex Inc. is proud to introduce a new generation of stopping bottom bracket with the SBB V<sub>3</sub>. That device is designed to reduce the risk of a door from falling in the event of cable failure. It is also featuring an innovative burglar-resistant device that prevents tampering with door from the outside.**

The SBB V<sub>3</sub> comes with a protective cover and a highly rust-resistant cast steel design. A minimal cable tension is required, as low as 5 lb (2,3 kg), reducing the risk of activation in rail curve. Rated for up to 1 000 lb (450 kg), cable adjustment uses standard cable loop.

Other features:

- Two choices of roller location (lower pivot point for better header clearance)
- Up to 2" (51 mm) of travel for cable adjustment
- Designed for limit switch installation directly onto the bracket
- Tamper-proof (cannot remove cable when under tension)
- Requires low minimum cable tension
- Allows cable diameter up to 3/16" (5 mm)
- 2" (51 mm) roller and track
- Pull rope installation hole

«Our engineering team proved all its quality with the creation of this product. The introduction of the SBB V<sub>3</sub> by Canimex will set new standards in the industry. Canimex's mission is to continue to build loyal and unique customer partnerships by supplying innovative solutions... the SBB V<sub>3</sub> is another step towards that way», says Michel Beaudoin, Director of Torque Force Division.

## **Canimex Inc.: A history of dedication to manufacturers**

Founded in 1969, Canimex began as an importer-exporter of mechanical power transmission components and industrial supplies for the manufacturing of snowmobile and agricultural machinery. Since then, our company operations have expanded and diversified to include three distinct divisions: Mechanical Power Transmission, Fluid Power, and Torque Force garage doors hardware.

Our name is synonymous with innovation, performance and superior quality. We benefit from a dynamic, dedicated and skilled workforce of close to 850 people and maintain warehouses and highly advanced production facilities totaling over 550 000 square feet.

Canimex's Torque Force Division is recognized as a world-class OEM supplier, committed to delivering a broad range of specialized, high value hardware components to Access Systems manufacturers.

***Canimex... The Driving Force in Innovation.***
